Why do you need Data Leakage Risk Assessment?

DLP
RISK ASSESSMENT

The development of information technology makes communication easier than ever before. Smartphones, email, pendrives, cloud storages, social networks provide many different way of electronic communication. Therefore keeping the relevant business information within the organization is more and more challenging. Organizations try to protect their information, but business needs urge them to develop to newer, faster, and broader communication. Technology solutions are not enough to keep the information within the gates, human intelligence of the employees find the way to leak out the information; this could be dangerous to the organization. The level of the data leakage is unmeasurable without proper tools, the organizations are not able to determine whether they need a Data Leakage Prevention system or not. Or, if they need it, they cannot define which channels requires protection. DLP Risk Assessment service can help to define the data leakage channels, it can give proof and measure the current risk level at the organization

Powered by
QUADRON
Safety: Confirmed

²**CYBER
SECURITY**

Business and security advantages of the service:

▶ Detect data leakage cases at the organization in the timeframe of the service
▶ This can prove the data leakage at the organization so it can be easily decided whether a DLP investment would be efficient or not
▶ It helps to define the processes, rules and samples for a future DLP solution

During the on-site work QUADRON will:

▶ Provide qualified security engineers to discover data leakage from the information system
▶ Implement the DLP technical infrastructure to detect data leakage incidents in the timeframe of the service
▶ Analyse the alerts coming from the DLP infrastructure
▶ Create a report about the data leakage incidents and the volume / types of the incidents

Delivery of the service:

▶ Report about the data leakage incidents and the volume / types of the incidents with details about the incidents, the rules and samples used in the service and quantitative information about the level of data leakage problems at the organization.

Qualitynet's Strategic Partner in IT Security

QUADRON Cybersecurity Services Ltd. is a specialist of digital security, data and system protection. Our team of consultants at our consultancy and service competence center are professionals with a minimum of 10 years of experience and the highest level of expertise certified at international theoretical examinations. The service scope of our experts includes conventional IT security services such as auditing, vulnerability testing and penetration testing, while our service center is capable of designing and building the most complex protection systems.
