Do you have a general view of how effectively your security plan is working?

# INFORMATION SECURITY HEALTH CHECK

The Information Security Health Check can help you evaluate the current security status and to diagnose strengths and weaknesses of the existing security controls. We assess the maturity of the information security of your organization and the divergence from the standard requirements. The service is based on the methodology of the ISO/IEC 27001:2013 International Standard. A comprehensive security health check provides insight and visibility into the organization's security posture, in order to help you make informed decisions. This is not a certification audit - the best utilization of this service is to measure the security level before and after an overall security program or projects. The information security health check is a non-technical service, but QUADRON also offers other technical services, like configuration analysis, vulnerability analysis or penetration test.

### **Business and security advantages of the service:**

- ▶ Efficiently increase security awareness among the different management levels
- ▶ Standard-compliant operation can be easily assessed by an independent reviewer
- ▶ Management can be sure that the information security requirements are fulfilled
- ▶ Such security reviews can increase the trust of interested parties (e.g. subsidiaries, third parties, service providers, suppliers, etc.)

### **During the on-site work QUADRON will:**

- ▶ Provide a high quality, independent review of your Information Security Management System by qualified (CISA, CISM, CRISC, ISO 27001 Lead Auditor) experts
- ▶ Understand the organization structure and core business processes based on your documentation, so that QUADRON can help to define the suggested positions for the interviews
- ▶ Analyze the information security related documentation and the control environment (like IT security policy, security processes, operational controls, etc.)
- ▶ Interview the key persons (CIO, IT professionals, CEO, HR, etc.) to understand how the controls are designed
- ▶ During the interviews, QUADRON will measure the effectiveness of the designed controls in selected samples
- ▶ Prepare Information Security Health Check documentation based on the ISO/IEC 27001:2013
- ▶ Prepare an executive summary of the security status

### **Delivery of the service:**

- ▶ Information Security Health Check documentation based on ISO/IEC 27001:2013 standard Annex A

### **Qualitynet's Strategic Partner in IT Security**

QUADRON Cybersecurity Services Ltd. is a specialist of digital security, data and system protection. Our team of consultants at our consultancy and service competence center are professionals with a minimum of 10 years of experience and the highest level of expertise certified at international theoretical examinations. The service scope of our experts includes conventional IT security services such as auditing, vulnerability testing and penetration testing, while our service center is capable of designing and building the most complex protection systems.
