Why do you need to perform an information Security Risk Analysis?

INFORMATION SECURITY RISK ANALYSYS

In the first phase of the information security risk analysis, QUADRON prepares an information security review to evaluate the current security status. We then diagnose the strengths and weaknesses of the security controls. This is followed by the identification of the most probable threats and the analysis of the related risks to these threats. Finally we will work out the necessary recommendations to mitigate the risks. QUADRON can also help you prepare the risk analysis methodology, execute incident loss analysis, risk assessment and to prepare an overall risk action plan. The service is based on the methodology of the ISO/IEC 27001:2013 International Security Standard and uses the threat catalog of the ISO/IEC 27005:2011 standard. It's up to your senior management to make a decision about the acceptable risk level and the risk treatment methodology. QUADRON makes recommendations on how risks can be mitigated to achieve the desired acceptable level.

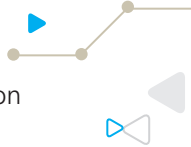

Business and security advantages of the service:

- ▶ Increase security awareness, helping management in making informed decisions
 - ▶ Risk assessment is the most cost-effective way to invest in security
 - ▶ Security costs and the return on investment will be accountable with risk levels
 - ▶ Reduce the outage time of business processes caused by incidents
 - ▶ Security audits increase the trust of interested parties
- 

During the on-site work QUADRON will:

- ▶ Provide a high quality, independent risk analysis of the Information Security Management System by qualified (CISA, CISM, CRISC, ISO 27001 Lead Auditor) experts
- ▶ Understand the organization structure and core business processes based on your documentation, so that QUADRON can help to define the suggested positions for the interviews
- ▶ Analyze the information security related documentation and control environment (like previous risk assessment, IT security policy, IT operational procedure, etc.)
- ▶ Interview the relevant key persons (CIO, IT professionals, CEO, HR, etc.) to understand how the controls are designed and which risks are relevant to the organization
- ▶ Evaluate the risks (depends on the likelihood of the occurrence and the extent of the loss)
- ▶ Prepare Information Security Risk Assessment documentation based on ISO/IEC 27001:2013
- ▶ Prepare an executive summary of the highest, prioritized risks

Delivery of the service:

- ▶ Information Security Risk Analysis and risk assessment documentation
- 

Qualitynet's Strategic Partner in IT Security

QUADRON Cybersecurity Services Ltd. is a specialist of digital security, data and system protection. Our team of consultants at our consultancy and service competence center are professionals with a minimum of 10 years of experience and the highest level of expertise certified at international theoretical examinations. The service scope of our experts includes conventional IT security services such as auditing, vulnerability testing and penetration testing, while our service center is capable of designing and building the most complex protection systems.
